Design Review
Report
Malthouse Lane, Llantarnam
DCFW Ref: N170
Meeting of 12th July 2018
Declarations of Interest

Panel members, observers and other relevant parties are required to declare in advance any interests they may have in relation to the Design Review Agenda items. Any such declarations are recorded here and in DCFW’s central records.

Steve Smith declared that he has worked with both Enzo Homes and Powell Dobson Architects on schemes within Swansea, in his role at Swansea Council. This work was unrelated to the scheme brought to design review. All attendees were happy to proceed on this basis.

Consultations to Date

A pre-application meeting was held in December 2017 with Torfaen CBC and a following meeting took place in May 2018 to discuss submission of Discharge of Conditions applications.

The Proposals

The proposal is to create a high quality residential development that uses traditional forms and materials to respond to the mature landscape setting of the surrounding woodland, the retained key landscape features across the site and the site topography.

The proposal includes provision of 180 dwellings, associated roads, drainage, other services infrastructure, open space and landscape provision. The application seeks to enhance the character of the site and ensure due regard to the setting of the Grade II Registered Historic Park and Garden and the listed historic assets which are located adjacent to the site. The units are spread over two parcels of land that are referred to as Malthouse North and Malthouse South. An existing outline consent is also in place for the site.

Main Points

DCFW commends the aspiration to deliver a high quality residential development which sits comfortably within the unique landscape setting, whilst responding sensitively to the adjacent Llantarnum Abbey. Further work is needed to maximise the value afforded by the distinctive setting and fulfil the potential of the site in manner that responds to the to the ambition and quality being sought by the local authority.
The following points summarise key issues arising from the review and should be considered to inform further work ahead of reserved matters applications being submitted:

**Development Brief**
An effective vision and development brief for the site will be critical in guiding and controlling future development to ensure that the key design objectives are delivered. The legal status and weight of such a brief is important to the delivery and the use of a Section 106 agreement is considered an appropriate method to provide greater control and status for the development brief. The Section 106 agreement could also imbed the need for regular design team workshops so that the evolution of the design is discussed at an early stage with the LPA.

**Distinctiveness**
The potential to create a distinctive development which relates to the adjacent heritage and green assets has not yet been fully realised. The north eastern edge closest to the Abbey could be better considered to ensure this is of the highest possible design quality and makes a positive contribution to the setting of the Abbey.

Likewise, opportunities to work with the existing green infrastructure and incorporate a green strategy throughout the site have not been utilised. Further consideration could be given to the edges of the site to the north and how these can be designed to optimise the benefits of adjacency to green infrastructure. The greater potential for bringing the green landscape into the site to enhance its character and strengthen its distinctiveness and sense of place, should be more thoroughly explored. The proposed village green is currently unconvincing and further consideration should be given to ensuring that it can be active and well used.

**Views and vistas**
No views of the site from surrounding landscape and heritage assets were presented as context analysis. Presentation of these views would allow the panel and the local authority to better understand design rationale and how the proposals will impact upon the setting of the heritage asset and views from the adjacent green space.

An assessment of potential views and vistas of the surrounding green infrastructure from the site could also help to a create a place which feels better connected to its context, by optimising views and vistas as residents move around the site.

**Density and topography**
A strategic approach to topography and density should be further tested to ensure that the development sits comfortably within the site and makes the most of its unique assets. Higher densities could be located along the primary streets or closer to the village centre for example, however the selected approach and rationale should be based on thorough testing, clearly demonstrated in the material presented.

Site sections would aid better understanding of how the proposed layout responds to the topography of the site. We understand that these are currently being developed for inclusion in the development brief and it would be helpful to see these in due course.

**Movement strategy**
Desire lines across the site and to surrounding destinations should be mapped to inform pedestrian and cycling routes, helping to promote activity and active travel opportunities. It is important to note that the movement strategy for this site and the surrounding development, including the roundabout serving this site, pre-dates the Active Travel and Wellbeing of Future Generations legislation. This means that the proposed development must work harder to encourage active travel within the context of the consented outline plans. These routes could link to the surrounding green areas to encourage active travel for both regular journeys and recreation. It will be important to consider the duty the legislation places on the local authority now and in the future and take the opportunity to explore any flexibility that may be possible in the conditions inherited from previous decision making and proposals. This may be a means of improving the access to and movement throughout the site.

**Direct frontage**
The current framework plan suggests that Malthouse Lane will not have any direct frontage. Direct access off this lane could better connect the proposed development with its context and create a more active street.

**House types**
We understand that house types for the site are still being developed and discussion is ongoing with Torfean CBC. Consideration could be given to the architectural approach and whether ‘traditional’ house types are most appropriate for this sensitive site, and whether a more contemporary architectural language which responds to the context would be more appropriate to offer greater choice and respond to the expressed ambition and site potential.

**Extent of the proposal**
The design team could explore whether the site to the south west of the development could be considered as part of this scheme. Incorporating this area into the site boundary could help to better connect the proposals to the village centre to the west of the roundabout.

**Next steps**
DCFW appreciates the opportunity to comment on the proposals at this stage and the current planning context. We would welcome further dialogue and encourage the team to take advantage of further design review meetings as the proposals and development brief evolve.

Comisiwn Dylunio Cymru Design Commission for Wales is the trading name of DCFW LIMITED, a Private Limited Company established under the Companies Act 1985 and 2006, Company No: 04391072 incorporated in England and Wales as a wholly owned subsidiary of the Welsh Government. Registered office: 4th Floor, Cambrian Buildings, Mount Stuart Square, Cardiff CF10 5FL T: 029 2045 1964 E connect@dcfw.org. The comment recorded in this report, arising from formal Design Review through our Design Review Service, is provided in the public interest for the consideration of local planning authorities as a material consideration, and other users of the Design Review Service. It is not and should not be considered ‘advice’ and no third party is bound or required to act upon it. The Design Review Service is delivered in line with DCFW’s published
protocols, code of conduct and complaints procedure, which should be read and considered by users of the service.

A Welsh language copy of this report is available upon request.

Attendees

Agent/Client/Developer: Enzo Sauro – Enzo Homes
Architect/Consultants: Bernadette Kinsella – Powell Dobson Architects
Planning Consultant: Robin Williams – Asbri Planning
Local Authority Rebecca McAndrew & Adam Foote – Torfaen County Borough Council

Design Review Panel:
Chair Carole-Anne Davies, Chief Executive, DCFW
Lead Panellist Steve Smith
Jamie Yeoman
Kedrick Davies
Wendy Maden, Design Advisor, DCFW

Observers: Nada Anwar
